

EXPLANATION

Flood-prone area: The flood-prone area shown on this map has been based in part on Flood Plain Information Studies by the U. S. Army, Corps of Engineers. In areas where studies have not been made, flood levels were projected from available data. The flood level is approximately at the 100 year flood elevation, which means the frequency of occurrence at this magnitude is 1% each year or once in every 100 years.

Drainage basin boundary: The top figure represents the area in acres and the bottom figure represents the area in square miles of the basin or that part of the basin in this report.
Example: $\frac{12,478.79}{19.50}$ acres
square miles

Note: Some areas in the flood plain are protected by levees or floodwalls. Care should be taken in the construction of levees so that the natural drainage is not obstructed. For best utilization of the flood plain, structures and contents should be able to withstand damage from flood water, and any structure or fill in the flood plain should not restrict maximum flow during periods of flooding.

Areas of Selected Drainage Basins: Areas, in square miles, of selected drainage basins are shown in the following Table. Points on this map have been identified by symbol, number, and letter (example A 1-B). The symbol represents the point where the total drainage basin area was determined though only a portion of the basin may be shown on this map; the point may be situated at the intersection of two or more drainages. The number identifies the location and the letter identifies the particular drainage or combined drainages.

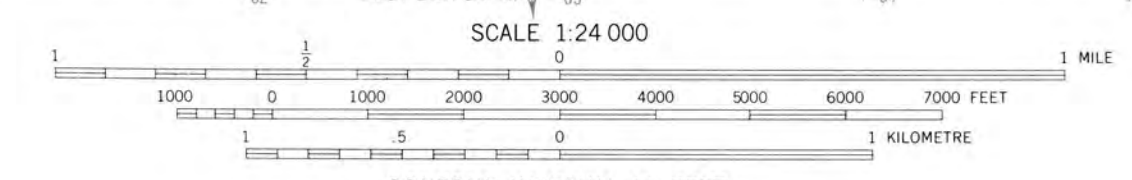

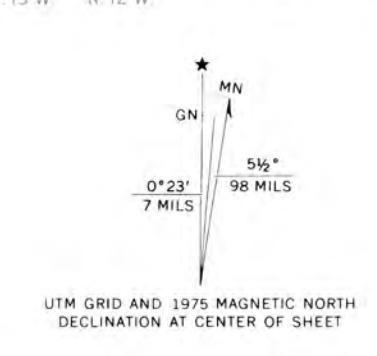

Location A	Drainage Basin Description	Area Sq. Miles
1-A	Brodie Creek above the mouth	12.4
1-B	Fourche Creek above the mouth of Brodie Creek	83.8
1-C	Combined Areas of 1-A and 1-B	96.2
2-A	Rock Creek above the mouth	21.7
2-B	Fourche Creek above the mouth of Rock Creek	98.8
2-C	Combined Areas of 2-A and 2-B	121.0
3	Coleman Creek	3.5
4	Coleman Creek above 28th Street	2.8
5	Little Fourche Creek	21.4
6	Little Fourche Creek above Baseline Road	17.4
7	Fourche Creek above Ark. Hwy 365	163.0
